

Build systems that *outlive* their makers.

An application-only, 5-week program in agentic & systems architecture — taught in a small cohort, on your real systems, by someone who has shipped them at scale.

Sunil Mathew — Engineering leader · Google, Amazon, Walmart

26 years building & leading engineering on systems serving up to 100M+ users — a Google Workspace platform at ~31B weekly executions, Amazon Prime's core, 300+ products at Walmart. Now leading agentic-AI work and teaching the craft.

WHO IT'S FOR

- **Tech Leads & Staff Engineers** — making the architectural calls teams build on
- **Senior Engineering Managers & Architects** — directing agentic & distributed systems
- **Senior Engineering Leaders & Directors** — owning outcomes; titles differ, judgment doesn't

WHAT YOU'LL BE ABLE TO DO

- Design agentic systems that hold up in production
- Make the irreversible decisions with confidence
- Reason about scale before it bites you
- Carry the craft forward to your team

INSIDE THE PROGRAM — 5 WEEKS, LIVE

- **Wk 1** — Foundations of durable architecture
- **Wk 2–3** — Agentic systems in production: multi-agent, RAG, evals, cost
- **Wk 4** — Scale, consistency & the hard trade-offs
- **Wk 5** — Your system, reviewed live in the room

LIVE EXPERIENCE

- 100+ senior engineers, architects & EMs mentored
- ~100 engineering managers trained on agentic systems
- Building an agentic-AI system, as a startup, right now

FORMAT	ADMISSION	INVESTMENT
5 weeks · live · 15 seats	By application	AUD 3,000
