

V4 recording brief

Five social recordings: D03 use-case choice, D07 architecture, D21 meaningful metrics, D25 model changes and D31 specialist voice. These replace the earlier four-script production requirement. The 5–7 minute website VSL is a sixth, separate recording. No raw footage is present in this package.

Record the complete approved script naturally. Use a quiet room, clear microphone audio, eye-level framing and space for captions. Keep an uncluttered background; avoid screens containing product or personal data. Capture a clean take and a short pause before and after it. Do not add personal incident numbers spontaneously.

Sunil reviews D01/D05/D03 voice samples and the factual-review list. Record D03 and D07 first for batch 1; then D21/D25/D31. Alchemy edits only after footage exists. Produce captions and a verbatim final transcript from the actual recording; scripts are not evidence of final subtitle timing. Review names, technical words, contrast and phone readability.

Use 1080 x 1350 framing for feed exports, maintaining a central crop for other approved formats. Format choice is a production default, not a platform performance claim. Do not delay written-page implementation for the VSL.

ID	Script words	Estimated duration at 130 words/min	On-screen material
LC-V4-D03	193	1.5 minutes	Redrawn example from the approved script; never a product screenshot
LC-V4-D07	215	1.7 minutes	Redrawn example from the approved script; never a product screenshot
LC-V4-D21	195	1.5 minutes	Redrawn example from the approved script; never a product screenshot
LC-V4-D25	201	1.5 minutes	Redrawn example from the approved script; never a product screenshot
LC-V4-D31	213	1.6 minutes	Redrawn example from the approved script; never a product screenshot

Timing is an estimate. Final edit duration follows the recording. No extra fifth-video delivery fee or SLA amendment is inferred from the production plan.
