

Sunil — consolidated factual review

The 32-post V4 direction is selected. This review closes factual and delivery questions without restarting strategy. Current posts use complete illustrative examples, so they do not claim that the product incidents are verified personal stories.

First priority: first eight posts

Review D01 written, D05 carousel and D03 video for natural delivery. Confirm the teaching explanation in D08. Review the source claims for topics 1–4 on PDF pages 4–7; supply the relevant dated decision record or redacted trace if the actual story may be used. Confirm any co-founder publication clearance. Record D03 and D07 once their scripts are approved.

Product stories

For each SUNIL-T01–T16 row in the source claim register, record the evidence, date/system version, whether it remains current, what may be disclosed, and the approver/date. Do not send personal data or an unrestricted production export. An approved redacted excerpt is sufficient if it supports the exact claim.

Check the 366-second incident, five-configuration/fifty-input comparison, comparative costs, undefined 90 percent claim and eighteen-month timeline especially carefully. Resolve the document's contradiction between disclosing household/launch details and prohibiting them. Confirm whether specialist-model comparisons actually support the proposed generalisations.

Programme and offer

Confirm the 30 live hours, working-system scope and actual feedback process. Specify independent-work amount/interval, sessions and timezone, delivery mode, catch-up and access arrangements. Resolve the PDF's ₹1.2 lakh founding rate against the call-derived ₹1.1 lakh founding direction and ₹1.5 lakh list reference. Confirm final eligibility, tax, payment and refund terms with finance. None of these figures is in current public campaign copy.

Validate the statement that there is no certificate and the distinction between an industry case and permission-scoped company work. Reconcile the normal 8–10 enterprise group with any five-person quote or company-case condition before an offer.

Release approval

Select the exact version of each asset in the approval tracker. Record reviewer, date and file hash; leave publication authority separate. Later edits need renewed asset approval. Programme facts or product-story permissions are not permission to send messages, deploy pages or publish all assets automatically.

Topic-by-topic factual questions

Use the page numbers in your original campaign PDF. Confirm the permitted facts and supply an appropriate redacted source; otherwise the illustrative version remains.

Topic	PDF page	What to confirm
1	4	Decision records and dates; distinguish planned pilot from actual households; permission to discuss launch history.
2	5	Architecture versions, actual role of models and rules, and which parts have shipped.
3	6	Role-to-model records, dated provider documentation and comparison evidence; do not universalise independence.
4	7	Redacted architecture and trace, implementation version and privacy review.
5	8	Before/after workload evidence, actual limits, enforcement tests and current implementation state.
6	9	Data model, update rules, evidence behind scores and correction behaviour; distinguish confidence from permission.
7	10	Dated incident trace, impact and fix evidence; redact domain details and obtain publication clearance.
8	11	Actual suites, scoring and coverage, reviewed thresholds, human rubric and results; no general safety guarantee.
9	12	Schema, access enforcement and negative access tests; do not present nullable ownership alone as protection.
10	13	Incident records, remediation tests, deferral decision; verify or omit the undefined 90 percent estimate.
11	14	Metric definitions and observations; no user outcomes or adoption inference without evidence.
12	15	Dated platform/account policy, design records and actual delivery status; no blanket current platform claim.
13	16	Raw comparison, prompt/configuration versions, dated price basis, decision function and repeat-run evidence.
14	17	Incident scope/date, affected-period evidence and repair; never infer or publish user counts.
15	18	Permission-flow tests, corrected implementation, current legal/platform review and clearance; no admission or legal conclusion inferred.

Topic	PDF page	What to confirm
16	19	Separate candidate comparisons, language-specific review, measured outcomes and fallback; title exceeds detail without evidence.
